

DATA CENTER CONSULTING SERVICES

ASPEO Data Center Consulting Services are an enterprise-wide consultative approach to help you manage mission critical environments. The services encompass the entire lifecycle, from assessment, strategy and design, to consulting on recommendations for implementation, design modification and operational services. We have the expertise, methodologies and tools to help you manage your data center investments, improve operations and performance, and deliver business results.

As a service, we focus on the analysis, design and implementation of technology that can be applied in your organization to help solve critical business issues. We help our customers to assess existing technology and infrastructure components in place today, and help you map this technology inventory to decisions you make – every day – to improve the productivity and efficiency of your operations. Based on the experience of our consultants we can help you better understand the impact of technology choices that are part of business decisions.

ASPEO has the expertise, methodologies and tools to help you manage your data center investments, improve operations and performance, and deliver business results.

ASPEO PROVIDED BENEFITS

- Reduce risks by leveraging best practices from experience with large scale, enterprise-wide projects

- Improve alignment of your IT investment with business imperatives
- Improve application availability and performance
- Accelerate time-to-market for new application deployments
- Provide greater integration for management and operations
- Ensure process coverage and effectiveness

DATA CENTER CONSULTING SERVICES

STRATEGY FORMULATION

Long range planning, technology strategy, and proactive optimization of computing resources are key areas of our expertise. ASPEO can help you with a comprehensive strategy that drives real cost savings through carefully planned initiatives, or simply provide needed strategic consulting to help you develop the right strategy, plan, or approach to solve a specific challenge.

BEST PRACTICES IMPROVEMENTS

Our team can help with the evaluation and recommendation of industry standards and best practices. We can also assist with IT policy formulation and implementation, such as data retention, compliance management, server/storage management disciplines, and security. Moreover, we can help you improve efficiency through organizational assessments/alignments, process improvements, and staff consolidations.

DATA CENTER AVAILABILITY & RISK ASSESSMENT

Information availability is critically important in today's fast-paced corporate world. The goal of ASPEO's evaluation, planning and data center risk assessment services is to identify obstacles to and recommend solutions for redundant and fault-tolerant network & support infrastructure for mission critical environments.

STAFF AUGMENTATION

Many organizations have a need – whether on a one-time, occasional, or ongoing basis – to supplement their existing IT team with technical professionals. ASPEO can help by augmenting staff with individuals who possess the key skills for a given project or initiative.

ASPEO has experienced IT professionals that are available as consultants or as integrated team members. Skill areas range from CIO-level consulting to hands-on engineering, architecture, and systems administration.

BUSINESS CONTINUITY & DISASTER RECOVERY

Business continuity is vital to business success. It can no longer remain the concern of the IT department alone. How do you determine the continuity and recovery requirements of your business? How do you identify and integrate critical business and IT priorities into a comprehensive continuity program? Where do you start? ASPEO can help by providing comprehensive business continuity and disaster recovery consulting services.
